PRINTING AND PHOTOGRAPHY DIVISION
WEEKLY REPORT FOR PERIOD ENDING
8 December - 14 December 1983I. Items or Events of Major Interest that have Occurred During the
Preceding Week

STAT A.  Brochure: One thousand (1,000) copies of the
4-color  Brochure are scheduled for delivery on 14
December 1983.

B. ETECS:

1. On the evening of 12 December 1983, a power failure in GJ56 Headquarters destroyed the primary disks used for production of the NID and PDB. After rebuilding the disks and reconfiguring the system, production was reestablished; and the overnight schedules were met. Inquiries from the DDI/OCPAS as to the possibility of including the GJ56 area on UPS have been relayed to Headquarters Engineering Branch, Real Estate and Construction Division (HEB/RECD).
2. Two employees of NPIC/Production Services Group have received two weeks of training in ETECS in anticipation of an Atex acquisition by NPIC.

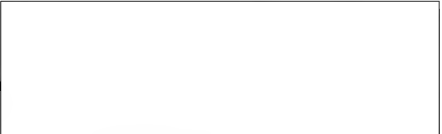

C. Copier Management Program: OL/P&PD has not received a scheduled delivery date from Xerox for the remaining seven of 14 Model 1045 copiers. Xerox has been informed of the situation, and we are awaiting final word.

D. Kodak Demonstration: P&PD representatives attended a demonstration at Eastman Kodak on a new process for photographing and printing color maps. The system reduces 40x60 inch color maps to a 4x6 inch piece of film and then allows blowback to the original size. Product quality produced by the system was impressive.

II. Significant Events Anticipated During the Coming Week

None
